

# MAKE UP REMOVER

# MAKE UP REMOVER

The first step in the care routine is to clean the skin. The surface of the skin and its pores are constantly covered with dead cells, environmental pollutants and cosmetics. Therefore, cleansers play an important role in removing keratin layers, cleaning pores, and as a result, maintaining health and improving skin quality. On the other hand, continuous use of detergents and cleansers incompatible with skin type can cause serious skin damage. The oily phase is responsible for a large part of removing make-up oils, and the water phase of this cleanser has milder surfactants, so it is more suitable for sensitive skin. In addition to cleansing, the water phase softens the skin due to the presence of some additives.

L'DORA Vitamin Two-Phase Makeup Remover Solution is a suitable cleanser for face and eye area and easily removes waterproof makeup as well. This product rarely causes sensitivity or dryness and without harming the skin, it has great cleansing effects and makes the skin clean and clear. Also, the solvents in this cleanser are among the most compatible solvents for the skin.

# MAKE UP REMOVER

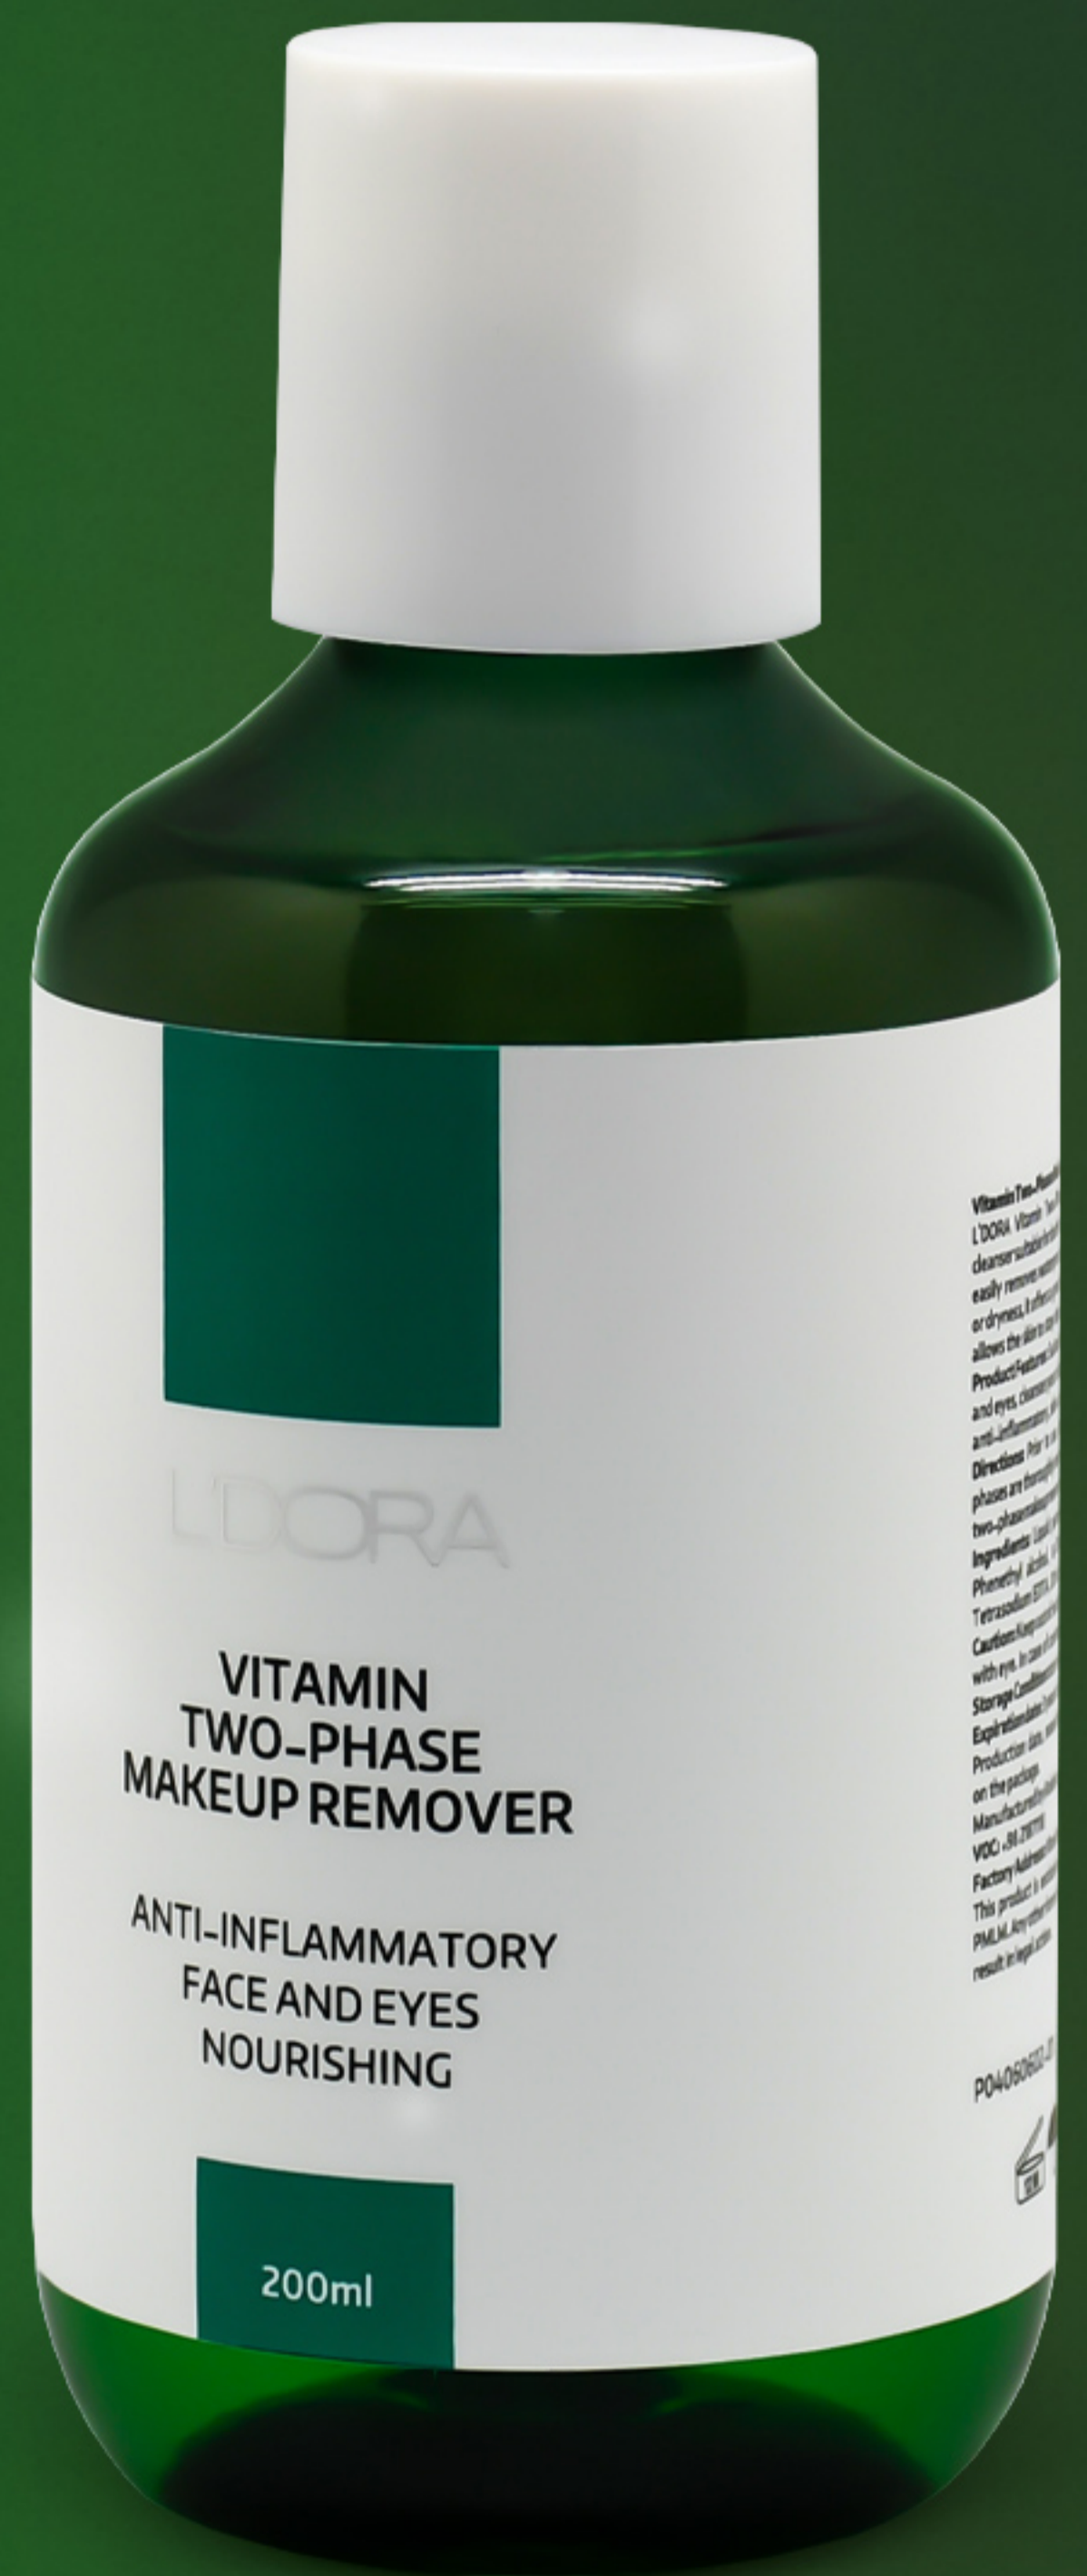

The liquid paraffin used in this cleaning solution is a colorless and fragrance-free mineral oil. This oil is widely used in the formulation of cosmetics and health products and it prevents the loss of natural moisture by creating a protective barrier on the skin. This is an emollient mineral oil that has waterproof properties and helps to soften and smooth the skin. Hydrogenated castor oil is another effective ingredient, in this product it is used as a softener and moisturizer in cosmetic products. This oil creates a protective layer on the surface of the skin and acts as a barrier against the loss of the skin's natural moisture and ultimately prevents the formation of wrinkles. Vitamin E contained in this solution is very suitable for skin regeneration. This vitamin acts as a softening and anti-inflammatory agent on the skin and protects it from damage caused by free radicals. The allantoin contained in the biphasic cleansing makeup solution formulation is a plant compound that is used as an anti-inflammatory agent to improve and prevent dryness, roughness, scaling, and skin irritations. This substance softens and moisturizes the skin and, in addition to regenerating the skin, reduces itching and sensitivities. L'DORA two-phase makeup remover solution is not only for removing makeup, but it can serve as a suitable cleanser for all skin types.
