FACE TONER

One of the most essential parts of any skin care routine is toner. Toner is a water-based skincare product typically applied after cleansing the face and before using other skincare products. There are various types of toners and each formulated for a different purpose or for a different type of skin. Toner deeply cleans impurities, cosmetics and sebum left in the skin pores and helps to shrink open pores. This product also adjusts the pH of the skin and makes it soft and supple. A suitable and good quality toner consists of antioxidant, regenerative and restorative compounds that nourish and strengthen the facial skin. These compounds have a great effect on its health and vitality.

FACE TONER

In addition to the proper cleansing power, this product also has an anti-inflammatory and soothing effect. The glycerin used in L'DORA face toner is an excellent hydrating for the skin and transfers it into the deep layers of the skin. Phytokeratin, another ingredient in this product, contains hydrolyzed corn, wheat and soybean protein, which is known as a hydrating agent. Natural phytokeratin gives the skin a soft and healthy appearance by hydrating the epidermis layer. Among the well-known extracts used in this toner, aloe vera extract is a rich source of polysaccharides, antioxidants, vitamins and minerals. This extract has hydrating and anti-inflammatory properties and in addition to hydrating the skin, it also has a cooling and healing effect. Another amazing extract included in this toner is tea tree extract.

FACE TONER

This extract is highly regarded for its anti-bacterial and anti-microbial properties, which is used in skin care products, including toners and anti-acne products. Allantoin is a hydrating and healing agent that is used in the composition of this product. Sodium hyaluronate is another effective ingredient in this toner, a salt of hyaluronic acid. Sodium hyaluronate is utilized in cosmetic products for hydrating and repairing the skin. This material quickly penetrates the skin and holds up to a thousand times its weight in water. Since the skin naturally loses water as it ages, sodium hyaluronate replaces some of the water in the dermis and effectively reduces surface wrinkles and signs of aging.
