KERATIN AND PROTEIN HAIR MASK

The main protein in the hair structure is keratin. Various factors, such as UV rays, environmental pollution, dyeing and bleaching of hair, using thermal devices such as hair dryers, flat irons, and etc., damage the health of the hair by reducing the amount of this protein. Dry, frizzy, brittle, and sometimes tangled hair occurs as keratin levels decline in the hair structure.

Masks that are suitable for your hair type can restore the health, softness, shine, and overall well-being of your hair. Keratin and protein hair masks regenerate and strengthen the hair by absorbing keratin locally. By repairing damaged hair and strengthening and regenerating the hair shaft, these products contribute to the softness and health of the hair.

KERATIN AND PROTEIN HAIR MASK

Hydrolyzed proteins of silk, keratin and wheat are the most common effective ingredients that are used in the formulation of hair care products today. These proteins are converted into smaller pieces during a process called enzymatic hydrolysis so that they can easily penetrate the hair shaft with a lower molecular weight.

L'DORA HERBAL keratin and protein hair mask is a unique product for professional hair care. Due to its unique ingredients, this mask improves the health, repair, and strength of hair shafts. The product prevents frizzing and tangling of hair and makes it soft and silky. In addition, hydrolyzed silk and keratin proteins, antioxidants, extracts, and herbal oils make hair protein-rich and keratinized.
